Sense manipulation through VR technology allows caregivers and loved ones a better understanding of what it’s like to live with dementia. After the “tour,” individuals will have the opportunity to ask questions and share their stories.

One of the most popular events of Brain Awareness Week is back again! Discussion and dialogue include topics centering around bioethical questions, classical problems in the philosophy of mind, and related questions.

The concept of sex and gender bring to mind different definitions and reactions. This event showcases how interdisciplinary sex and gender can be viewed, and how we can learn to see through another’s perspective.

Dr. Matthew Mihelic is a physician in the Department of Family Medicine/Primary Care at UTMCK. His lecture is a part of the NeuroNET BrownBag Seminar series.

Have you considered graduate school in the future? Stop by the Mary Greer Room to chat and have lunch with current neuroscience graduate students in different departments!
